HAROLD F. B. TATE

Gomel, Belarus | +375 25 948 6906 | hbankwe@gmail.com
Software Developer LinkedIn: www.linkedin.com/in/harold-f-b-tate-22130920a/ | Portfolio: www.haroldfbtate.me

I'm a Junior Software Engineer working on backend services and applied AI. I build APIs and async pipelines (Django, FastAPI, Celery, Kafka) and integrate LLM agents, RAG, and vector search into deterministic, scalable systems. I work AI-first — using agentic coding assistants, spec-driven development, and agile/scrum — with hands-on Docker experience, practical CI/CD work, and service integration across AWS, Azure, and GCP. I also have exposure to Kubernetes and Terraform.

Skills:

Programming languages: Python, SQL, Bash, HTML5, SASS.
Backend & APIs: Django, Django Rest Framework, FastAPI, Flask, SQLAlchemy, Alembic, Pydantic, PydanticAI, GraphQL (Strawberry), REST APIs, OAuth2, Celery.
AI/ML & Agentic Systems: LangChain, LangGraph, Model Context Protocol (MCP), Agentic Orchestration, Tool-Calling Agents, Retrieval-Augmented Generation (RAG), Vector Search (pgvector, Pinecone), LLM Evaluation (LLM-as-a-judge), Prompt Engineering, Guardrails, PyTorch, OpenCV.
AI-Assisted SDLC & DevTools: Claude Code, Cursor, GitHub Copilot, Spec-Driven Development, AI-assisted Refactoring, Test Generation, Agentic workflows for CI/CD.
Message brokers: Kafka, RabbitMQ, AWS SQS.
Databases: PostgreSQL, MongoDB, Redis, CosmosDB, DynamoDB, ElasticSearch, pgvector, Pinecone.
Cloud: AWS (Lambda, EKS, RDS, S3, SQS, CloudWatch, IAM), Azure (AI Search, CosmosDB, Functions, SQL Database), GCP (BigQuery, GKE, Pub/Sub).
DevOps: Docker, Docker Compose, Kubernetes (EKS, AKS), Terraform, Jenkins, GitHub Actions, GitLab CI/CD, Prometheus, Grafana.
Source control systems: Git, GitLab, GitHub.

Work Experience:

INNOWISE | Gomel, Belarus **Project role**: Python Developer (Intern) **Period:** 01.2026 – 10.2026

ECO-FOOTPRINT CALCULATION & ANALYTICS PLATFORM An ecological CO2-footprint calculation platform balancing normalized transactional schemas with heavy analytical workloads.

- Designed backend service boundaries and API contracts (Pydantic/OpenAPI), including the sync-vs-async split (Kafka for batch workloads, direct calls for read paths).
- Built multi-step AI workflows with LangChain and LangGraph converting natural-language requests into structured, traceable planning outputs.
- Enforced deterministic schemas and validated tool-calling in LLM responses using PydanticAI.
- Owned data modeling and migrations (PostgreSQL, Alembic) with zero-downtime rollouts; provisioned infrastructure with Terraform and maintained CI/CD.

Check the portfolio for more.

HTP Gomel STARTUP INCUBATOr | Moscow, Russia **Project role:** Junior Software Developer **Period:** 01.2024 – 10.2025

OMNICHANNEL AI RETAIL PLATFORM integrating semantic e-commerce search with physical store automation and AI-driven supply chain workflows.

- Engineered RAG pipelines (ingestion, chunking, re-ranking) over unstructured data, grounding LLM responses with citations and improving reliability by 93%.
- Designed tool-calling agents and multi-step LangGraph workflows to automate supply-chain reporting, integrating Python AI services into a legacy PHP/Node platform.
- Implemented hybrid vector search and re-ranking with pgvector and Azure AI Search across the product catalog.
- Built FastAPI/Pydantic/SQLAlchemy APIs and async pipelines (Kafka, AWS SQS, Redis, Elasticsearch) for batch operations.
- Introduced evaluation-driven development — automated LLM regression tests and LLM-as-a-judge gating for releases — plus PII redaction and prompt-injection guardrails

Check the portfolio for more.

NexGen Technology Center | Centre, Cameroon **Role:** Stem Bootcamp coordinator & Instructor **Period:** 06.2018 – 08.2020

Responsibilities:

- Designed and instructed foundational STEM, web (HTML5/SASS), and programming curricula for 50+ students, achieving an 85% completion rate;
- Mentored and led a student team to successful participation in the First Global Robotics Competition.

Environment: Python, C, C++, Javascript, HTML5, SASS, Scratch, Figma, Blender, Prometheus, arduino, Raspberry, rev robotic parts.

Selected Pet Projects: https://www.afidipro.com/fr, http://lesmarinettes.org/, elib.gstu.by/handle/220612/51534

Education:

- BSc Computer Science and Software Engineering — Sept 2022 - June 2026, GSTU Gomen, Belarus.
- BSc Computer Science — Jan 2025 - Jan 2028, UoPeople Online.
- MRes Commerce “Retail Chain, Technology, and AI” — Sept 2026 - June 2027, BTEU Gomel, Belarus.

Language proficiency: French (Native), English (B2) IELTS, Russian (B1)
Domains: Retail Tech, E-Commerce, Supply Chain, IoT, Ecology
